

Growforce Intro is an in-furrow and foliar micronutrient that aids in early plant development, expanding roots for maximum nutrient uptake. It helps address micronutrient deficiencies identified from tissue tests.

Features & Benefits

- Ideal combination of key micronutrients to be applied in-furrow and/or early in the plant's lifecycle, focused on vegetative development
- Applying in-furrow can lead to earlier germination and enhanced plant stand establishment
- Healthy, vigorous root systems ensure access to essential nutrients from the soil
- Pre-mixed in carefully controlled ratios so the crop receives the essential nutrients specific to its growth stage
- Zinc activates genes in the seed, mobilizes enzymes for emergence and is crucial for the synthesis of auxins
- Manganese and Magnesium encourage photosynthesis
- Manganese and Copper build disease resistance
- Copper also promotes energy transfer in the plants

Applications & Use Rate

Use Rate:

1-3 qt/acre

Applications:

In-Furrow and Early
Vegetative or Vegetative

Guaranteed Analysis:

Zinc (Zn)	3.2%
Manganese (Mn).....	0.8%
Magnesium (Mg).....	0.8%
Copper (Cu).....	0.8%
